Attention:

Before you begin, be certain that your pistol is clear and safe. You will need a small punch, allen wrench, screwdriver for installation.

1. Using a small punch, allen wrench, or screwdriver, depress the button on the bottom of the magazine baseplate and simultaneously press the baseplate off of the magazine body. Make sure to retain pressure on the spring so that it doesn't go flying out. You can also insert a punch in the magazine middle slot towards the bottom to retain the spring tension.

2. Ease the spring and bottom spring retainer plate out and set them aside. Notice the orientation of the spring as you will be inserting it back in the same manner. (The top follows the follower angle and angles up towards the barrel.)

3. The stock follower has a pin that will need to be removed in order for the follower to come out of the magazine body. You can do this by depressing it with your thumb from the side it will come out of. Remove it and the follower.

4. Insert the TANDEMKROSS +4 Follower in the magazine body and orient the spring and spring retainer plate as stated above. Replace the stock baseplate.

5. Load 14 rounds and enjoy!
